Navigation

Perform a complete scan on selected areas.

Remove the detected items. You could choose Normal file deletion (Faster) or Secure file deletion (Slower)

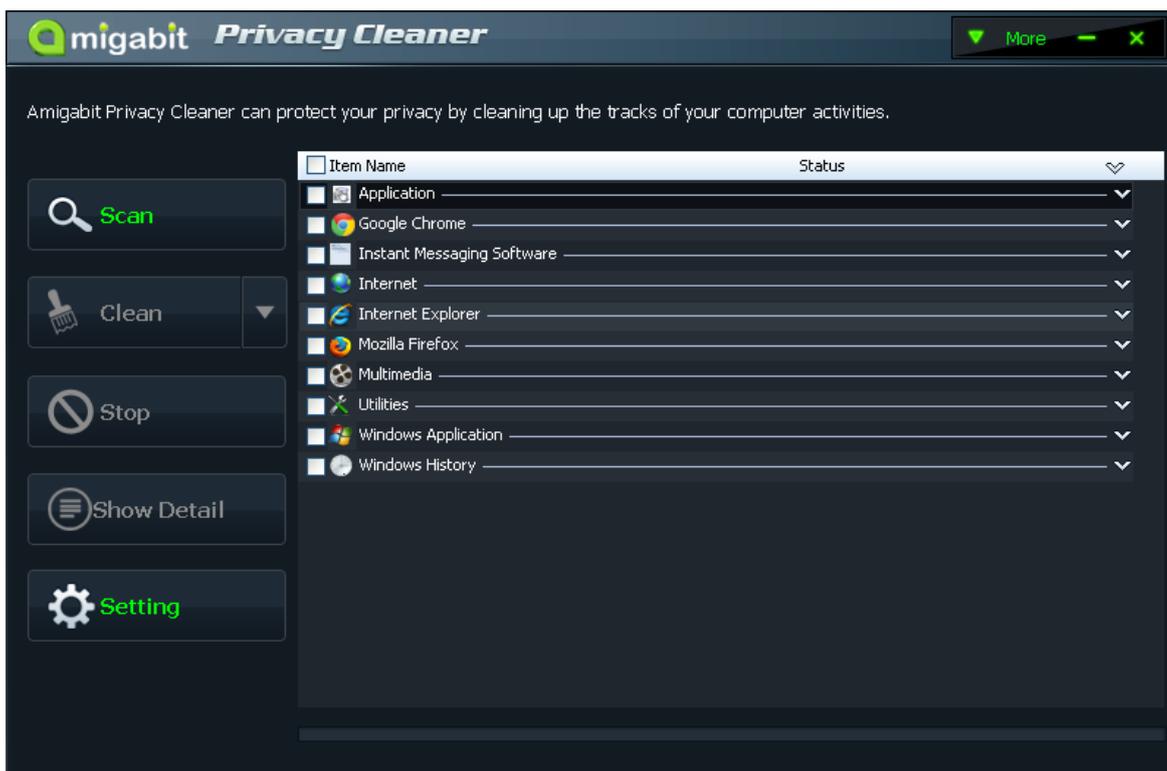

End the scanning process.

Restore your Windows Privacy back to the previous point before you have cleaned up Privacy last time quickly.

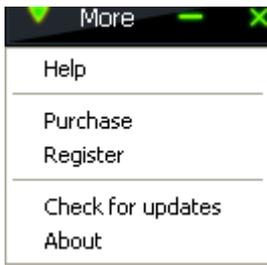

Make more personal or manual settings on: Optimize, Exclusion, Schedule, and General.
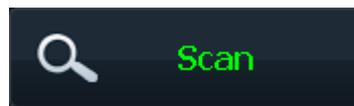

Main Screen

**More:** Find more options in its drop down list:

- **Help:** Reach Help documents instantly.
- **Purchase:** click to open the buy webpage for purchase online.
- **Register:** click to open the Register box for registration.
- **Check for updates:** click to check for the latest version.
- **About:** Provide details about software version, company information, trademarks, licensed information and more.

Full Guide

Step 1. Select the areas to scan.

Tick the areas in the Scan box and click on the to perform a scan on all your trackings.

- After the scan completes, it will turn to Clean box automatically.

Step 2. Clean to delete the detected information.

Select your file deletion option in the drop down list of "Clean" button.

Normal file deletion (Faster): remove unwanted files quickly with one click.

Secure file deletion (Slower): allow you to remove unwanted files permanently beyond recovery, although it will take more time.

Once you choose the way to clean your unwanted files, the option would be a default. Therefore if you want to choose the other way to remove your unwanted files, you need to select your file deletion option in the drop down list of "Clean" button again.

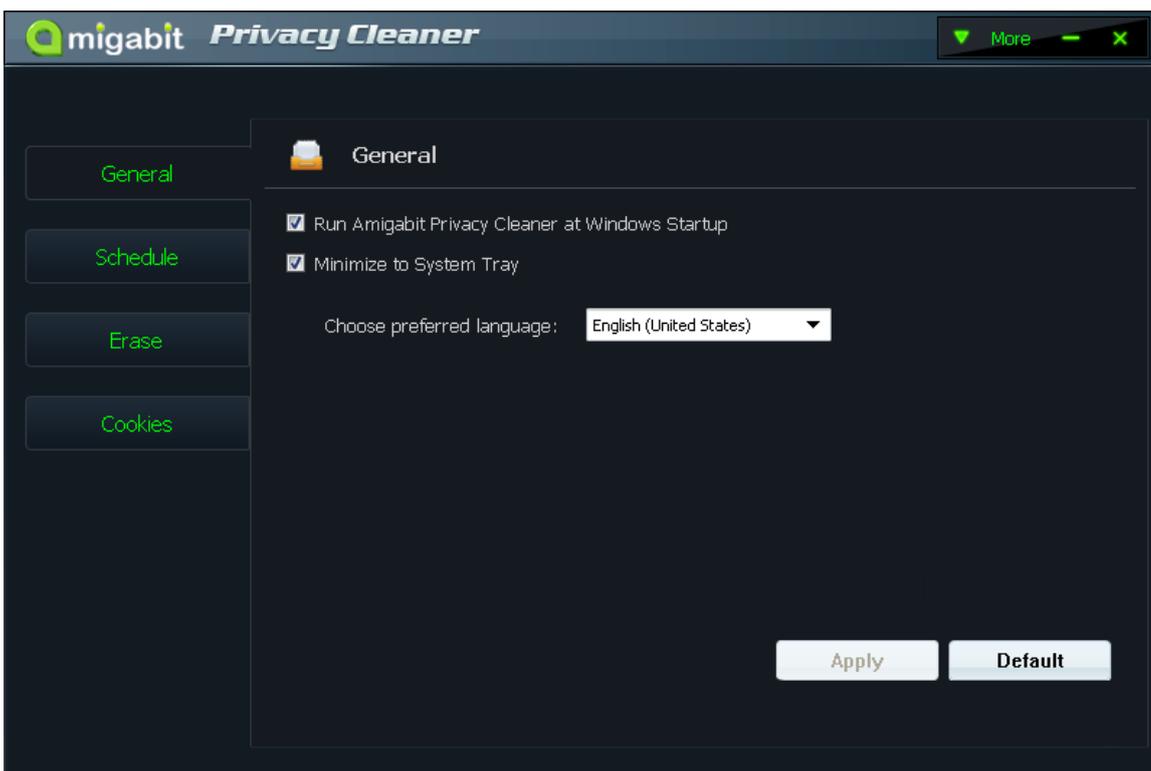

Note:
1. During the scanning process, if you click on the Stop button, you can end the scanning.
2. In the Clean box, before clicking on the Clean button, you can choose to view the detail information on the detected items:

You can also export the specified detected items and save them as html files by clicking on the "Export" button.
